

INTERNATIONAL OCEAN DRILLING PROGRAMME

SPECIAL CALL FOR PARTICIPATION

IODP³ Expedition 502:

Impact of Petit-Spot Magmatism on Subduction Zone

Seismicity and the Global Geochemical Cycle

Special Call Deadline: 20 June 2025

Special Call for Participation in IODP³ Expedition 502: Impact of Petit-Spot Magmatism on Subduction Zone Seismicity and the Global Geochemical Cycle

Co-Chief Scientists: Asuka Yamaguchi & Hiroko Kitajima
Expedition Project Manager: Natsumi Okutsu

Introduction

MarE3 currently plans to implement IODP³ Expedition 502: Impact of Petit-Spot Magmatism on Subduction Zone Seismicity and the Global Geochemical Cycle, planned to begin on 31 October 2025 and finish on 24 November 2025. IODP³ Expedition 502 will visit one site (Proposed Site TPC-01A) located off the central Japan Trench on the incoming Pacific Plate at 5485 meter water depth (**Figure 1**). The operational sequence to be completed by *D/V Chikyu* during IODP³ Expedition 502 consists of drilling three adjacent holes, one for wireline logging (8-1/2-inch) and the other two (10-5/8-inch) for coring with the Hydraulic Piston Coring System (HPCS) and the Rotary Coring Bit (RCB) to 160 m below seafloor (mbsf) to continuously recover the full sediment sequence.

Scientific Objectives of the Expedition

The goal of this project is to elucidate the existence of widely-distributed petit-spot volcanism that may significantly impact the generation of megathrust earthquakes and the Earth's geochemical cycles. Only ocean drilling can assess the nature of the acoustic basement beneath regions of anomalously thin sediment cover. For this purpose, we also plan to sample the sediment cover, including gases and pore fluids.

1. If the acoustic basement consists of extrusive rocks, then lavas or volcanic breccias will be sampled. In the case of intrusive rocks, fragments of thermally affected sediment will also be recoverable.
2. Determine the ages of all recovered sediments using magnetostratigraphy, tephrochronology, and biostratigraphy.
3. Geochemistry for the basalt samples will characterize the geochemical signature of this petit-spot magmatism and allow us to better assess its influence on subduction zone magmatism.

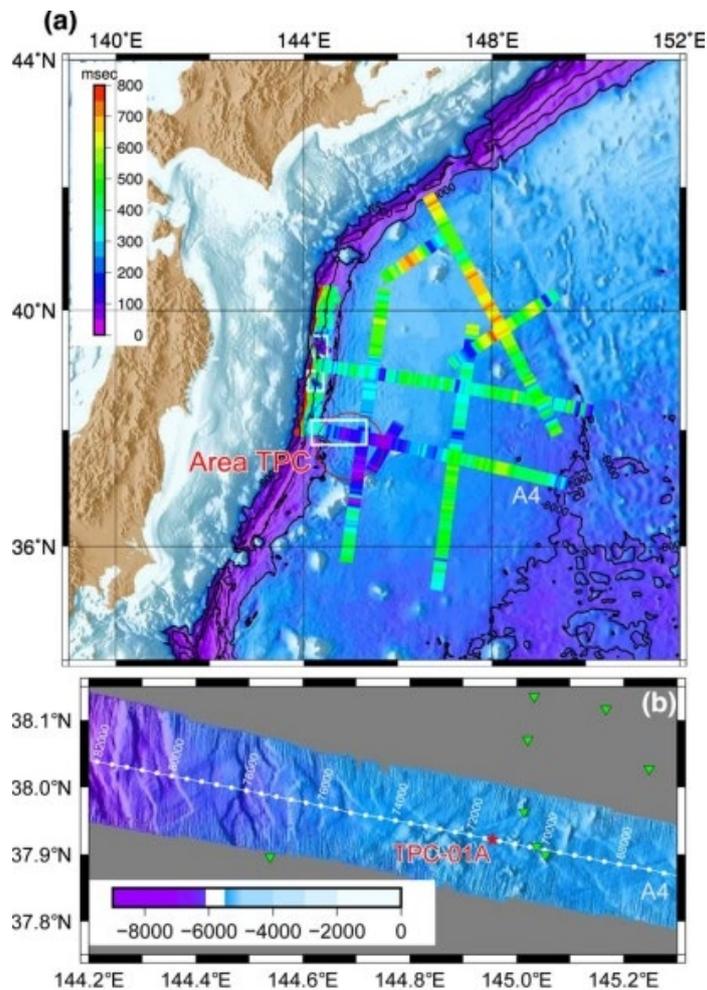

Figure 1. Proposed IODP³ Expedition 502 drilling Site TPC-01A.

Secondary science objectives include carrying out other geological, geochemical, and microbiological observations to the greatest extent possible during drilling in accordance with the [D/V Chikyu Standard Measurements](#) Document. Please read the Expedition 502 Scientific Prospectus available on the [IODP³ Expedition page](#) for further details.

Operation Plan

The general operations plan and time estimates are provided in **Table 1**. The operational sequence to be completed during IODP³ Expedition 502 consists of:

1. Drilling one 8-1/2-inch hole to 225 m below seafloor, and then perform wireline logging in this hole;
2. Two 10-5/8-inch coring holes: one with the Hydraulic Piston Coring System/Extended Shoe Coring System (HPCS/ESCS) to 60 m below seafloor and one with the Rotary Coring Bit (RCB) to 160 m below seafloor.

Table 1. Operations schedule for IODP³ Expedition 502.

Exp.	Operation	Hole Size (inch)	Depth (m)	Day(s)	Subtotal (d)	Total (d)
502	Portcall in Sendai			1	1	3
	Transit			2	3	
	Drilling	8-1/2	225	5	5	
	TPC-01A: WL	8-1/2	160	3	8	19
	TPC-01A: HPCS/ESCS	10-5/8	60-65	3	11	
	TPC-01A: RCB	10-5/8	160	8	19	19
Sendai crew change				1	1	20
Contingency Time				3.5	3.5	23.5

Expedition Schedule

Current plans have the expedition beginning in Sendai, Japan on 31 October 2025 and ending in portcall in Sendai, Japan on 24 November 2025. This schedule is subject to change. Updates and the latest information can be found on the [MarE3 website](#).

The total number of planned offshore operations days will be 24 days. The offshore Science Team will be about ~25 scientists and will be onboard almost three and-a-half weeks. The onshore Expedition Science Team will additionally include scientists who are not part of the offshore team.

Expedition Science Team – SPECIAL CALL

This Special Call is seeking scientists to fill two roles:

- a scientist with expertise in **Paleomagnetism** to join the Science Team, preferably as an offshore participant (however applications for research plan only participation are also welcome). Applicants must hold a PhD upon application.
- a scientist with expertise in **Sedimentology** to join the Science Team as an offshore participant. Applications from all career stages are welcome.

NOTE: All expedition schedules are subject to change based on Fiscal Year budgetary situation and site conditions.

How to Apply

Applications must be submitted to the IODP³ Science Office by the deadline of **midnight GMT on Friday 20 June 2025** using the **IODP³ Gateway** system, accessed via “Apply to Participate” on the [IODP³ website](#) or directly at gateway.iodp3.org.

Information on requesting an IODP³ Gateway account and on the content required in applications to this call is also available in the IODP³ [Guide for Applicants](#). Note that the applicant roles for this call are **Offshore and Onshore** (for either the Paleomagnetism or the Sedimentology role) and **Research plan only** (for the Paleomagnetism role only); see Section 3.1 in the guide.

For this call, please ensure you are clear in your application which role you are applying for, by selecting either 'Paleomagnetism', or 'Core description' (for the Sedimentology role) in the 'Your Research Background' section of the Gateway. Please also ensure you specify whether you will participate offshore (for either role) or by research plan only (for the Paleomagnetism role only).

Applications received by the deadline will be evaluated by the IODP³ Programme Member Offices and shortlisted candidates will be considered for selection by MarE3 and the Expedition 502 Co-Chief Scientists thereafter.
